

JAVA

SIMPLE.JAVA

```
package sample;

public class Simple {
    public static void main(String[] args) {
        System.out.println("kajol is a very beautiful girl");
        int a=10;
        int b=10;
        int c=a+b;
        System.out.println("the addition of a and b is: "+c);
    }
}
```

OUTPUT:

SINGLE.JAVA

```
package sample;

class Teacher {
    void teach() {
        System.out.println("Teaching subjects");
    }
}
```

```

        }
    class Students extends Teacher {
        void listen() {
            System.out.println("Listening to teacher");
        }
    }
public class Single {
    public static void main(String args[]) {
        Students s1=new Students();
        s1.teach();
        s1.listen();
    }
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface with the following details:

- Project Explorer:** Shows numerous Java files in the sample package, including Methodoverloading.java, Methodprogram.java, Multidimensionalarray.java, Multilevel.java, Multiple2.java, Multipleclass.java, Myclass.java, Object1.java, Object2.java, Objectprogram.java, Occurrencearray.java, Passingparameter.java, Person.java, Polymorphism.java, Ppp23.java, Program.java, Programitter.java, Scanner.java, Second.java, Secondinteger.java, Simple.java, Single.java, Subarray.java, Superclass.java, Switch.java, Teacher.java, Ternaryoperator.java, Th123.java, Try.java, Variables.java, While.java, and Zerosnonzeros.java.
- Code Editor:** Displays the content of Single.java:

```

1 package sample;
2
3
4 class Teacher {
5     void teach() {
6         System.out.println("Teaching subjects");
7     }
8 }
9 class Students extends Teacher {
10    void listen() {
11     System.out.println("Listening to teacher");
12 }
13 }
14 public class Single {
15 }
```
- Console View:** Shows the output of the program:

```

Teaching subject
Listening to teacher
```
- Outline View:** Shows the class hierarchy:

```

teach():void
Students
listen():void
Single
```
- Bottom Status Bar:** Shows the date and time (14-Sept-2023, 10:05:27 am - 10:05:28 am), temperature (31°C), and battery status.

SUBARRAY

```
package sample;
```

```

import java.util.Arrays;

import java.util.Scanner;

public class Subarray {

    public static void main(String args[]){

        //Reading the array from the user

        Scanner sc = new Scanner(System.in);

```

```
System.out.println("Kajol lives in a city of salem: ");

int size = sc.nextInt();

int[] myArray = new int[size];

System.out.println("The user of the main elements is between the class: ");

for(int i=0; i<size; i++){

    myArray[i] = sc.nextInt();

}

//Reading the number

System.out.println("Enter the required sum: ");

int reqSum = sc.nextInt();

System.out.println("The array created is: "+Arrays.toString(myArray));

System.out.println("sub arrays whose sum is: "+reqSum);

for(int i=0; i<myArray.length; i++){

    int sum = 0;

    for (int j=i; j<myArray.length; j++){

        sum = sum + myArray[j];

        if(sum == reqSum){

            System.out.println(Arrays.toString(Arrays.copyOfRange(myArray, i, j+1)));

        }

    }

}

}

}

OUTPUT:
```

SUPERCLASS

```

package sample;

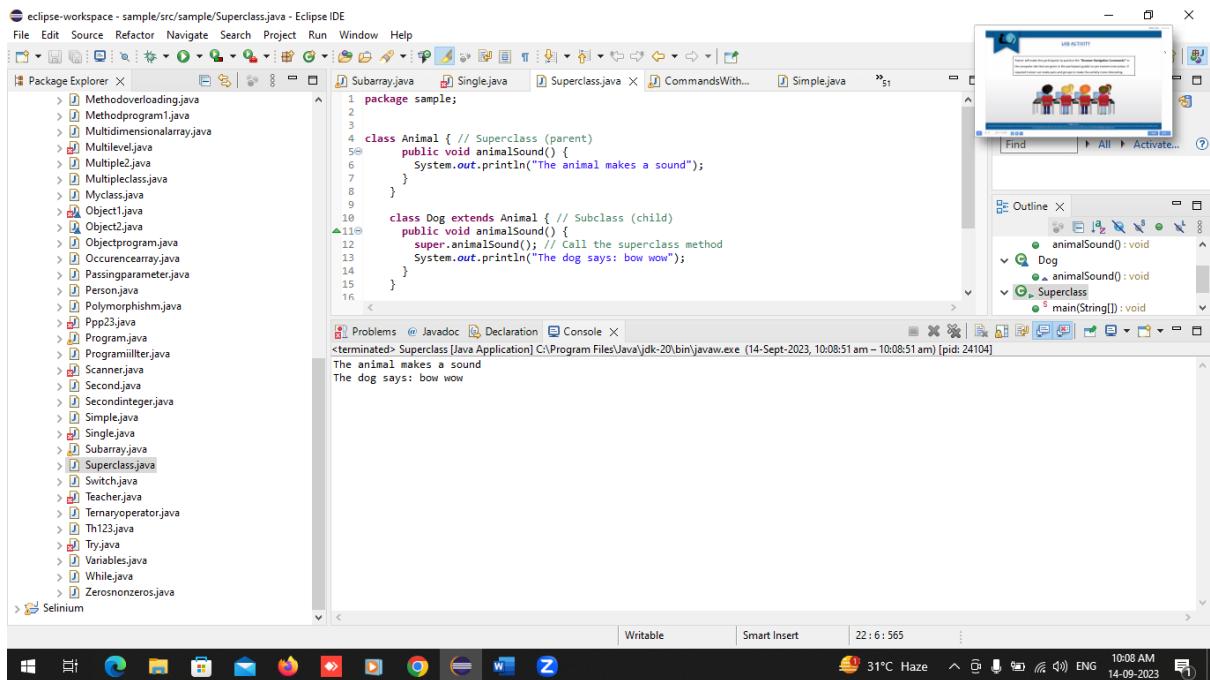

class Animal { // Superclass (parent)
    public void animalSound() {
        System.out.println("The animal makes a sound");
    }
}

class Dog extends Animal { // Subclass (child)
    public void animalSound() {
        super.animalSound(); // Call the superclass method
        System.out.println("The dog says: bow wow");
    }
}

public class Superclass {
    public static void main(String[] args) {
        Animal myDog = new Dog(); // Create a Dog object
        myDog.animalSound(); // Call the method on the Dog object
    }
}

```

OUTPUT:

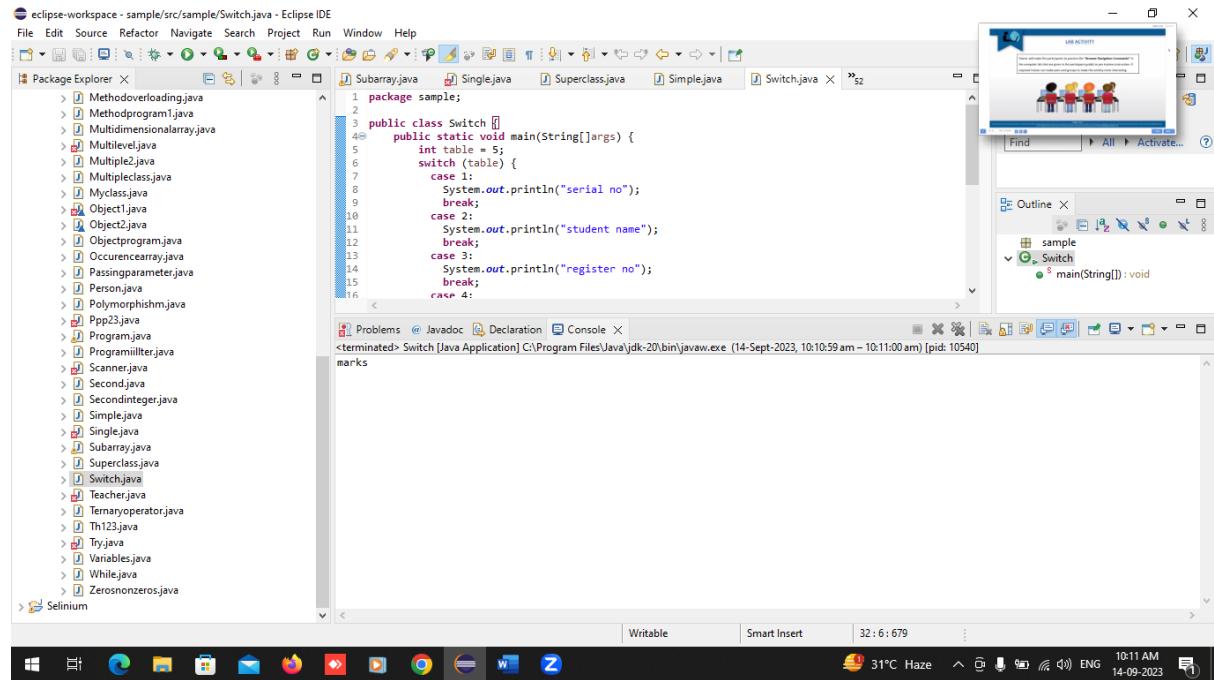

SWITCH

```
package sample;

public class Switch {
    public static void main(String[] args) {
        int table = 5;
        switch (table) {
            case 1:
                System.out.println("serial no");
                break;
            case 2:
                System.out.println("student name");
                break;
            case 3:
                System.out.println("register no");
                break;
            case 4:
                System.out.println("roll no");
                break;
            case 5:
                System.out.println("marks");
                break;
            case 6:
                System.out.println("student details");
                break;
            case 7:
                System.out.println("resut");

        int i = 5;

        do {
            i++;
            System.out.println("core java");
        }while (i < 10);
    }
}
```

OUTPUT

ZEROS AND NON-ZEROS

```

package sample;

public class Zerosnonzeros {

    static int a[]={1, 4, 3, 4, 0, 1, 5, 1, 1, 2, 0, 1, 8, 7, 6, 7, 0, 2,
4, 0, 3, 4, 7, 0, 4, 8, 0, 1, 5, 2, 0, 4, 1, 7, 1, 6, 7, 8, 0, 0, 0, 0, 8, 0, 8,
7, 1, 4, 8, 6, 4, 0, 0, 8, 1, 0, 0, 0, 2, 5, 4, 8, 8, 0, 3, 1, 1, 6, 7, 7, 5, 8,
4, 6, 0, 6, 2, 1, 3, 5, 7, 8, 4, 8, 5, 7, 3, 7, 5, 8, 0, 3, 3, 6, 2, 6, 8, 6,
5}; //array
    static int k=10; //given number
    static int n=a.length; //length of an array

    public static void move0toEnd()
    {
        int begin=0;
        for(int i=0;i<n;i++) //to push non-zeros in begin
        {
            if(a[i]!=0)//if non zero
            {
                a[begin]=a[i];
                begin+=1;
            }
        }
        while(begin<n) //rest of element is consider as 0
        {
            a[begin]=0;
            begin+=1;
        }
    }
}

```

```

public static void main(String args[])
{
    move0toEnd();

    for(int i:a)
        System.out.print(i+" ");
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface with the Zerosnonzeros.java file open in the editor. The code prints the elements of an array 'a' starting from index 1. The output window shows the printed values: 1 4 3 4 1 5 1 1 2 1 8 7 6 7 2 4 3 4 7 4 8 1 5 2 4 1 7 1 6 7 8 8 8 7 1 4 8 6 4 8 1 2 5 4 8 8 3 1 1 6 7 7 5 8 4 6 6 2 1 3 5 7 8 8 4 8 5 7 3 7.

SECOND INTEGER

```

package sample;

public class Secondinteger {

    public static int getSecondLargest(int[] a, int total){
        int temp;
        for (int i = 0; i < total; i++)
        {
            for (int j = i + 1; j < total; j++)
            {
                if (a[i] > a[j])
                {
                    temp = a[i];
                    a[i] = a[j];
                    a[j] = temp;
                }
            }
        }
        return a[total-2];
    }

    public static void main(String args[]){
        int a[]={1,2,5,6,3,2};
        int b[]={44,66,99,77,33,22,55};
    }
}

```

```

System.out.println("Second Largest: "+getSecondLargest(a,6));
System.out.println("Second Largest: "+getSecondLargest(b,7));
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface. The code editor displays the Java code for finding the second largest element in an array. The package explorer shows multiple Java files in the sample package. The console tab shows the output of the program: "Second Largest: 5" and "Second Largest: 77".

```

package sample;
public class Secondinteger {
    public static int getSecondLargest(int[] a, int total){
        int temp;
        for (int i = 0; i < total; i++)
            for (int j = i + 1; j < total; j++)
                if (a[i] > a[j])
                    temp = a[i];
                    a[i] = a[j];
                    a[j] = temp;
    }
}

```

ARRAYLIST

package sample;

```

import java.util.ArrayList;
import java.util.Iterator;

public class Programiillter {
    public static void main(String[] args) {
        // Make a collection
        ArrayList<String> cars = new ArrayList<String>();
        cars.add("Volvo");
        cars.add("BMW");
        cars.add("Ford");
    }
}

```

```

cars.add("Mazda");

// Get the iterator

Iterator<String> it = cars.iterator();

// Print the first item

System.out.println(it.next());

}
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface. The code editor displays a Java program named Program.java. The main method creates an ArrayList of strings containing "Volvo", "BMW", "Ford", and "Mazda". It then retrieves an iterator and prints the first item. The package explorer shows multiple Java files in the sample package. The output console shows the execution of the program and the resulting output: "Volvo".

```

21
22    }
23
24 }

```

SCANNER CLASS

```

package sample;

import java.util.Scanner;

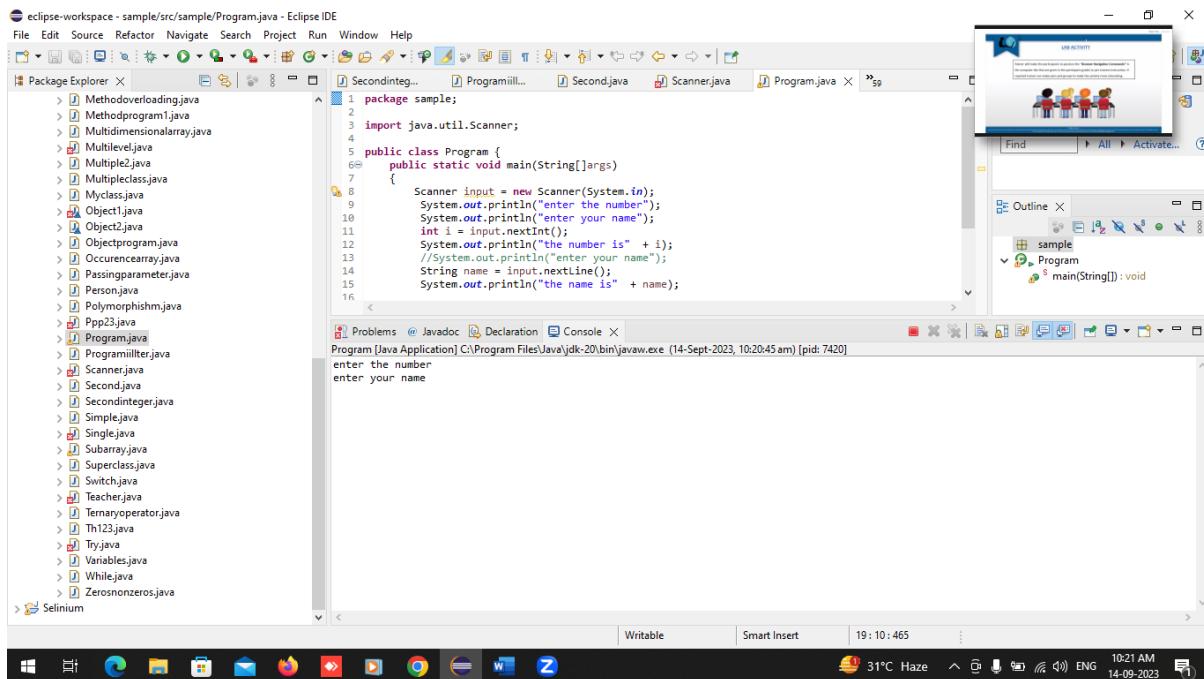

public class Program {
    public static void main(String[] args)
    {
        Scanner input = new Scanner(System.in);
    }
}

```

```
System.out.println("enter the number");
System.out.println("enter your name");
int i = input.nextInt();
System.out.println("the number is" + i);
//System.out.println("enter your name");
String name = input.nextLine();
System.out.println("the name is" + name);

}
```

OUTPUT:

POLYMORPHISM

```
package sample;

class Relation {
    public void neighbour() {
        System.out.println("he is my father");
    }
}

class savithiri extends Relation {
    public void name() {
        System.out.println("she is my mother");
    }
}

class mathi extends Relation {
    public void name() {
        System.out.println("he is a father of kajol");
    }
}
```

```

public class Polymorphism {
    public static void main(String[] args) {
        Relation myRelation = new Relation();
        Relation mysavithiri= new savithiri();
        Relation mymathi = new mathi();

        myRelation.neighbour();
        mysavithiri.neighbour();
        mymathi.neighbour();
    }
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface with the following details:

- File Path:** eclipse-workspace - sample/src/sample/Polymorphism.java
- Code View:** The code for Polymorphism.java is displayed, which contains a main method that creates instances of Relation, savithiri, and mathi classes and calls their neighbour methods.
- Output View:** The Console view shows the output of the program: "he is my father", "she is my mother", and "he is my father" repeated twice.
- Toolbars and Menus:** Standard Eclipse IDE toolbars and menus like File, Edit, Source, Refactor, Search, Project, Run, Window, Help are visible.
- Views:** Package Explorer, Task List, Outline, Problems, Declaration, and Javadoc are visible on the right side.
- System Tray:** At the bottom, it shows system status including temperature (31°C), battery level (Haze), and date/time (14-09-2023, 10:22 AM).

PASSING PARAMETER

```

package sample;

public class Passingparameter {

    static void pass(String fn) {
        System.out.println(fn + " kajol");
    }

    public static void newmethod()
    {

        System.out.println("java program is easy to understand while
we understood the concept clearly");
    }

    static int add(int a , int b)
    {
        return a+b;
    }
}

```

```

    }

    static void sub(int x , int y)
    {
        int z= x-y;
        System.out.println(z);
    }

    public static void main(String[] args) {
        pass("Rudhra");
        pass("aishwarya");
        pass("lakshmi");
        pass("sri shanthini");
        newmethod();
        pass("kajol");
        int z=add(10,20);
        System.out.println(z);
        sub(50,10);
        pass("sakthii");
        newmethod();
    }
}

```

OUTPUT:

The screenshot shows the Eclipse IDE interface. The code editor displays a Java file named Passingparameter.java. The package explorer shows multiple Java files in the sample package. The output console shows the execution of the program, displaying the names passed to the pass method and the result of the add method.
